Solutions: What is the difference between mitigation and adaption technologies? / Adaption technologies help people adapt to the changes in weather, like rainfall or droughts. / Can you give an example? / Sure. Drip irrigation is a good example. Farmers adapt to having less rainfall and only drip water directly on the plant. / And what about mitigation technologies? / They are trying to limit or prevent the emission of greenhouse gases to mitigate climate change. / That makes sense. Then solar panels would be a mitigation technology? / Yes, but also better insulation in homes or cooking stoves that use less energy. / I guess we will really need those technologies in the future, right? / If the climate continues to change this fast, we will definitely need to adapt. / I'm considering investing in solar panels to save money on my utility bill. / And while you're saving money, you also mitigating climate change. You should do it!
