Solutions: Do you think climate change is already affecting us? / Yes, there are studies that show changes in the last 30 years. / Why in the last 30 years? / Climate is defined as a period of at least 30 years. So, to be able to look at changes, we have to look at the last 30 years. / That's interesting. I didn't know that. And what actually changed? / Many things have been changing. Glaciers and ice caps are melting, and storms are becoming more intense. / But is that really so bad? / We don't really know. Humans have adapted to climate in agriculture and many other areas. Fast changes are difficult to adapt to. / I'm not sure I understand. Can you give an example? / For example, less rain and more droughts. Farmers will have to change what they produce because their old crops won't get enough water anymore. / That makes sense. My uncle is a corn farmer and highly specialized. I don't think he could just change his whole farm without losing a lot of money. / And that is just one example. That's why many people are scared.
